Stability and reliability of the system

Simplicity of installation and use

Flexibility of the technology for all needs

Smart Living Experience

For over **20 years,** Domintell has been focusing on developing **smart building management systems**. From designing software to the production of our own hardware, and ensuring the technical support of our equipment. Domintell is unique in how it masters its whole value-chain.

Nearly **10,000 installations**, in over **35 countries**, run on the Domintell technology. To the great satisfaction of our customers, our technology has proven to be highly **durable** and **stable**. Moreover, we have always been making sure that our systems could **continuously improve**.

Domintell is well-known for the **user-friendliness** of its system, as much regarding configuration during the installation as its daily use. Despite this simplicity, Domintell delivers a **high level of performance**.

Its technology is suitable for **residential** or **professional** use. It suits high-end houses as much as classic ones, hotels, nursing homes, offices, factories, shopping malls, etc. And that within every budget.

Safety, energy management, comfort, Internet-of-Things, mobile app, etc. The scope of **features** covered by the Domintell system keeps growing, in order to stay at the forefront of the innovation in our field.

Welcome to the **Smart Living Experience** by Domintell.

Nicolas Vryghem
Director

Made in Belgium

Based in Nivelles, Belgium we develop, manufacture and distribute our own complete building automation system based on an industrial bus standard (RS485) and/or wireless based on the Bluetooth Low-Energy® standard. Thanks to these standards, our system remains opened to third-party solutions.

Mastering our whole value chain, we offer the best knowledge for the residential market equipped with our technology.

We are proud to provide a lasting and reliable system. Easy to install and configure, our user-friendly system grants a comprehensive service for all types of residences.

Our development team improves our technology everyday according to your needs. With Domintell we always offer you complete home automation.

Comfort for all types of residences
Welcome home.

An answer to all needs

A home is a place where people literally have to feel at home. The many possibilities and the range of sleek designed automation functions from Domintell make comfortable and user-friendly homes. Each type of residence requires its own specific functionalities. All owners have their own specific wishes. Both can be applied to our home automation system due to the endless configuration options.

- User-friendly touchscreens with many options
- Unique presence simulation, for safety
- Preprogrammed light scenes
- Energy-efficient temperature profiles
- Use of sensors for even more comfort
- Remote communication

Integrated system

Domintell is an integrated system. In concrete terms, this means all touchscreens and control panels are connected together. They can be paired with all devices: owners of houses use them according to their own needs. Whether it is about controlling the light, turning on the radio or setting the heating: all functionalities can be programmed for one button. This design gives the Domintell system an added value that makes the most complex scenarios possible and guarantees an optimum ease of configuration.

The configuration of the installation is done via the GoldenGate software. Developed by our team, this user-oriented software works with a drag & drop system. It has never been funnier to configure your home automation installation.

Safety

Feeling safe at home is important for the living comfort. Domintell offers access control, cameras and connection to an alarm system.

Thanks to access control, the owners themselves decide who gets access to their private property. The system recognizes a fingerprint, tag or code. With an integrated camera in the intercom, the owner can see who is at the door or gate and can talk to that person, even remotely. It is possible to see afterwards who rang the bell, also when it was not answered.

With the Domintell camera system, a home becomes safer. Cameras repel intruders and record what is happening on the private property.

Thanks to its open protocol, Domintell can be linked to most alarm systems. The alarm system can be switched on and off from each touchscreen, smartphone or tablet.

Design

The series of control panels and touchscreens perfectly fits in every type of home. The design is extensive, from classic to modern, with numerous colors and materials possible combinations.

These touchscreens can be customized with pictures or icons that can be uploaded directly to the screen.

Even though the Domintell devices get the best from our system, it can aslo be operated with third-party devices of your choice.

• Smooth navigation on the touchscreens

• High quality materials for long-term use

• Define up to 6 different actions on a single button

• Personalize your control panels from the Metal Collection

• Smart devices working with audio, sensors, blinds, lights and more

Smart savings

Manage energy consumption and configure the devices with the Domintell technology. The consumption can then be optimized. With the right settings, a smart and autonomous home will be created, triggering savings for water, electricity, etc.

Thanks to your different types of sensors, specific measures of motion, climate or humidity can trigger actions in your installation, therefore optimizing your energy savings and comfort.
