Smart Living Experience

For over **20 years**, Domintell has been focusing on developing **smart building management systems**. From designing software to the production of our own hardware, and ensuring the technical support of our equipment. Domintell is unique in how it masters its whole value-chain.

Nearly **10,000 installations**, in over **35 countries**, run on the **Domintell technology**. To the great satisfaction of our customers, our technology has proven to be highly **durable** and **stable**. Moreover, we have always been making sure that our systems could continuously **improve**.

Domintell is well-known for the **user-friendliness** of its system, as much regarding configuration during the installation as its daily use. Despite this simplicity, Domintell delivers a **high level of performance**.

Its technology is suitable for **residential** or **professional** use. It suits high-end houses as much as classic ones, hotels, nursing homes, offices, factories, shopping malls, etc. And that within every budget.

Safety, energy management, comfort, Internet-of-Things, mobile app, etc. The scope of **features** covered by the Domintell system keeps growing, in order to stay at the forefront of the innovation in our field.

Welcome to the **Smart Living Experience** by Domintell.

Nicolas Vryghem
CEO

Made in Belgium

Based in Nivelles (Belgium) we develop, manufacture and distribute our own complete building automation system. It is based on an industrial bus standard (RS485) and/or wireless working with the Bluetooth Low-Energy® standard. Thanks to these standards, our system remains opened to third-party solutions.

Mastering our whole value chain, you benefit from the best of our knowledge. Your business then moves upmarket.

We are proud to provide a lasting and reliable system. Easy to install and configure, our user-friendly system offers a comprehensive service for all types of shops.

Our development team improves our technology everyday in order to answer your needs and keep your system upgradeable, therefore improving your experience and your customer's.

● *The Belgian savoir-faire,
at the service of your business*

Tailor-made solutions •

Answer every need

The very essence of business is how customers are welcomed. A customer-friendly store and a sophisticated setting will always benefit your activity. To this end, we offer you infinite customization possibilities and a range of sleek automation features which will make your business a place tailored according to your vision.

Every establishment has its own culture and its singular needs. Shape a building in harmony with your vision by combining our devices with our endless configuration options. Your activity being unique, you will then be able to configure atmospheres and consumptions suiting every key moment of your activity (opening, maintenance, deliveries, closing, ...) and the profile of each person involved.

- Ensure an optimal welcoming for your customers
- Define atmospheres for each occasion
- Schedule the temperature management
- Control your blinds, shutters and accesses
- Integrate your audio
- Schedule your store front and signs lighting
- Automate your security system
- Remote activation of your installation with a single button
- Configure actions depending on profiles

Centralized system

With the Domintell system, all the information and performance of your devices can be managed from a central spot.

Monitor the performance of your equipments via your Domintell touchscreens or thanks to our software from your favorite devices. You can always have an eye on the whole building and its areas, from your front desk or anywhere else with the Domintell app.

Once you have defined your needs and those of your establishments, our smart building management system will act accordingly. You are then able to schedule the activation of your inside or outside areas according to time-based or environment-based settings.

Smart savings

Control your consumptions and configure your devices with the Domintell technology. Your automated consumptions will then be optimized. Once everything is set, you will have a smart and autonomous building, acting itself for savings: water, energy, etc.

The human factor is also essential when it comes to the daily life of your establishment. Define a specific scenario for each person involved in your business. Make your staff's job easier thanks to sensors or connected objects, and let the system take care of predictable daily tasks. For example, the activation of the establishment with a remote command. Your team will then have more time to spend at the service of customers.

Unmatched welcoming and atmosphere

The Domintell store

Main equipments

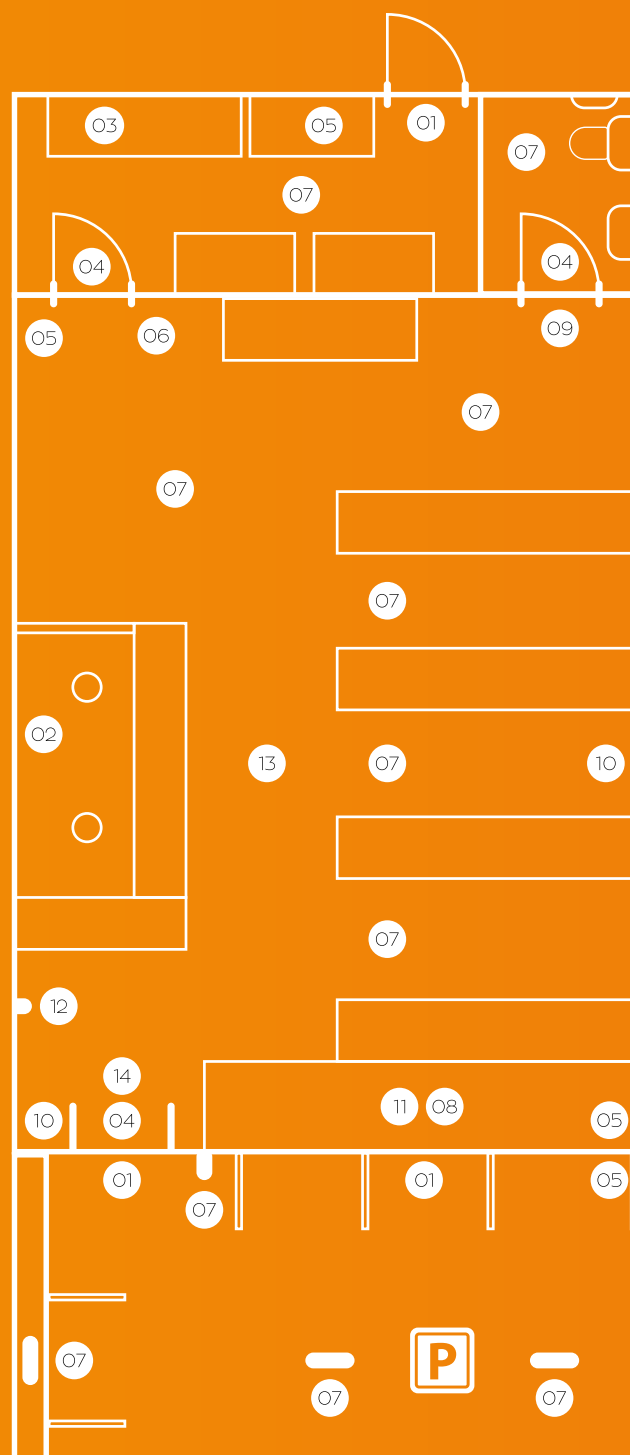

Sensors and commands

- 01 Door / Iron curtain

- 12 Alarms
- 13 Audio lounge atmosphere
- 14 Anti-theft protection

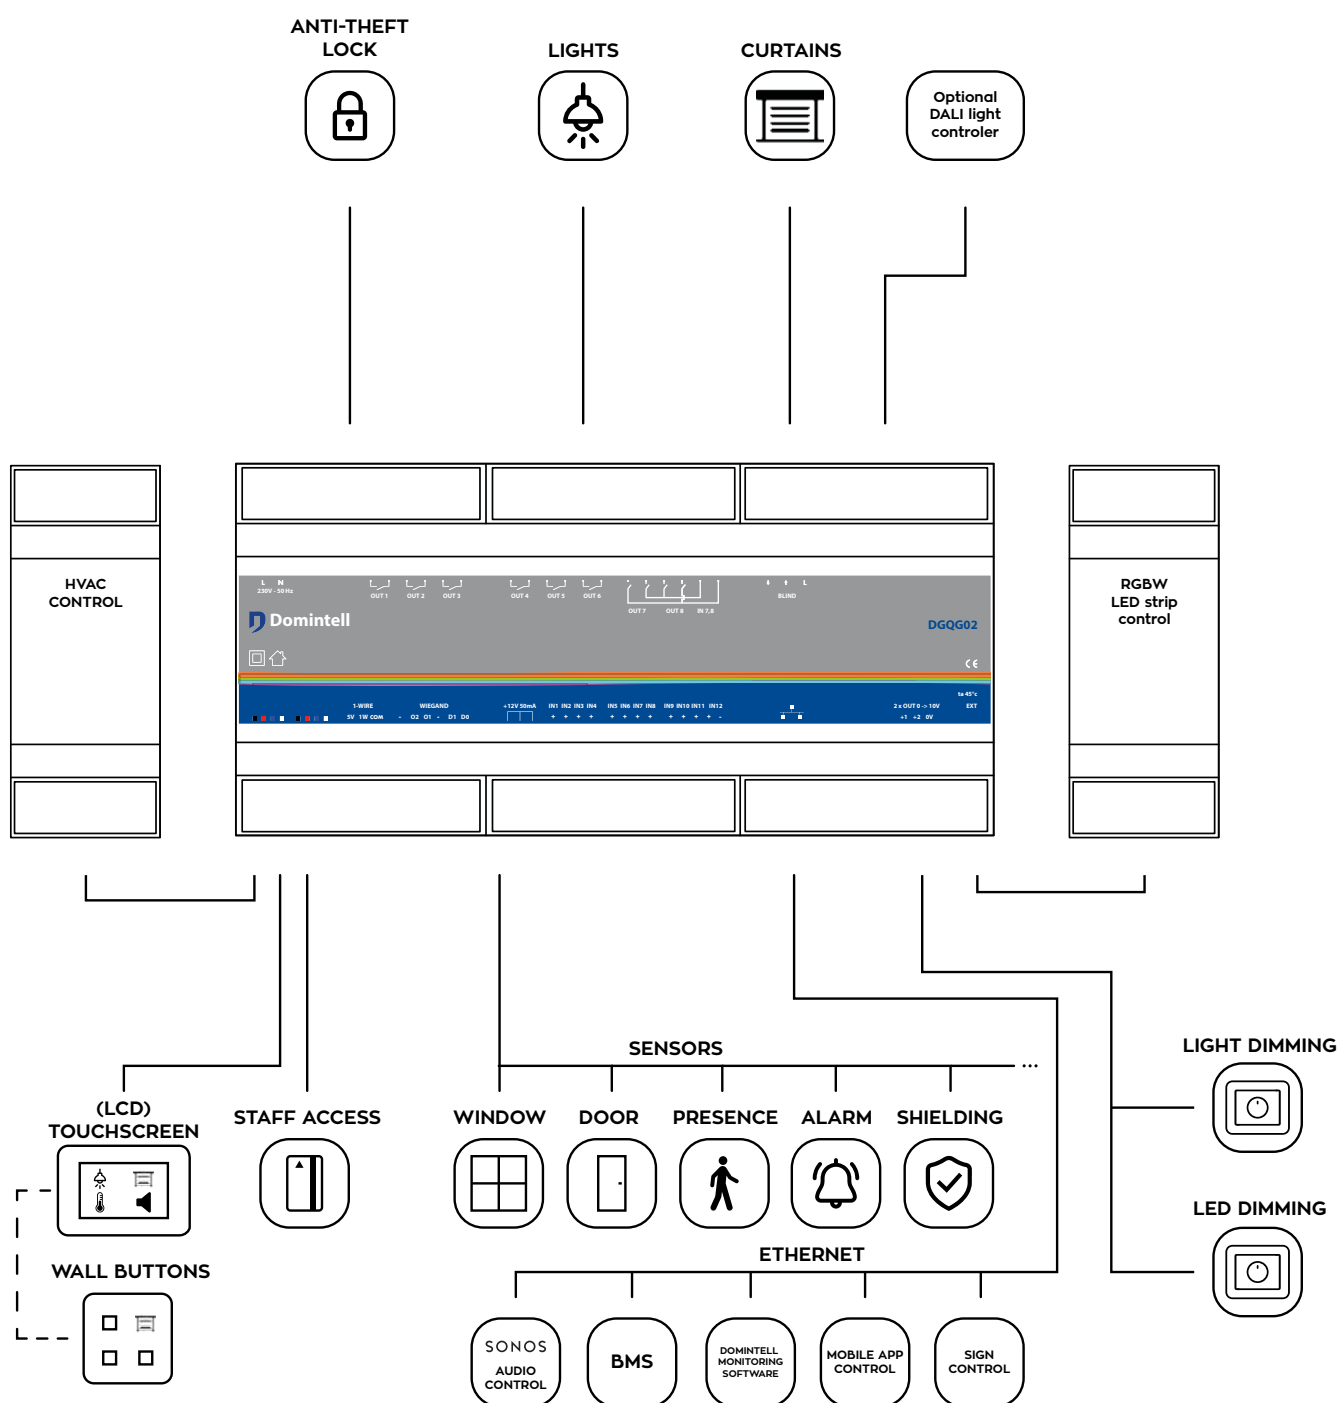

*Centralized control,
total optimization.*

An all-around bus system

Standard business installation

Features

A safe place

Secure the surroundings and the inside of the building by pairing your security systems with Domintell.

Monitor the whole site at any time in order to constantly keep an eye on your different areas. Always be aware of any presence or exits of the establishment. Trigger actions in response to intrusions, such as turning on all your lights and your audio system alongside accesses locking.

Our accesses control features will allow you to have an overview over your accesses and rooms all-around the building, thus offering you the possibility to manage them from a central spot and ensuring maximum safety. You will therefore be able to ease your staff's access with functionalities dedicated to restricted areas.

Make your life easier

Our series of motion and presence detectors will perfectly fit in any zone. With a precise and real-time detection, you will be notified of any trouble without having to constantly keep an eye on monitors.

Our range of solutions allows you to configure your installation so you can close and open your building within seconds. Tasks usually handled by your staff will then be triggered automatically.

Even though the Domintell devices get the best from our system, it can also be operated with third-party devices of your choice.

- Make sure your areas are safe in real-time
- The installation adapts to your unique needs
- Configure various actions triggered by a detection or a central button
- Your discreet sensors perfectly fit in your buildings
- Combine your installations with our technology to make the buildings management easier

Green establishments

Reductions of CO2 emissions caused by professional activities are one of the biggest challenges of our society. Configure your business so it can manage itself for more eco-friendly consumptions. Adopt an energy-saving behavior and reduce the environmental impact of your activity.

Our system allows you to measure the avoided CO2 emissions. Inform the customer of your eco-friendly behavior with data about your energy savings.

Quality and respect of the environment are values that have become essential; they will reinforce the branding of your business: Domintell helps you reach the highest levels of certification.
