

Aerts Speculaas - Lokeren, Belgium

The project

Founded in 1913, Aerts Speculaas was a family bakery located in Sombeke in the Flemish region. Gradually, the business specialized in the artisanal production of speculoos, which became their flagship product.

Since then, demand has continued to grow. In 2013, following recognition as a regional product by the Flemish institutions, it was decided to move production to a new 500 m² building to meet the demand that had become too high for a small structure. It was then decided that this building located in Lokeren would be equipped with a home automation system in order to optimize its performance. Ideal for small and medium-sized companies, the Domintell system quickly established itself as the reference choice.

Indeed, the building has been made smart with adapted configurations, while keeping an unparalleled ease of use. The operation of the new industrial furnace and packaging machines are automatically managed according to configurations made by the managers. In addition, the lighting of the entire site is controlled by home automation in order to control consumption.

Testimony

“ With this demand becoming overwhelming, we had to rethink the way we work. This was in fact achieved through a much larger production, for which the Domintell system is of a valuable help. It makes it possible to optimize the efficiency of our production to make the building autonomous and therefore smart in its consumptions. This has allowed us to meet our production objectives while preserving our values as a family and hand-crafting company. ”

The Aerts family

Configuration

Simplicity and flexibility of the system for configurations adapted to your objectives.

Lighting

The lighting of the entire site is autonomous and adapted to working hours thanks to home automation.

Automation

Domintell automation allows small structures to meet their production challenges.

Zoom on the shops

Every establishment has its own culture and its singular needs. Shape a building in harmony with your vision by combining the devices with our endless configuration options. you will then be able to configure atmospheres and consumptions suiting every key moment of your activity (opening, maintenance, deliveries, closing, ...) and the profile of each person involved. Moreover, by configuring your devices with the Domintell technology. Your automated consumptions will then be optimized. You will therefore create an autonomous building, acting itself for smart savings.
