

Private apartment - Riga, Latvia

The project

This design private apartment of the centre of the Latvian capital of Riga was finished in 2013. Its owners wanted to combine a very stylish interior with modern features. Therefore they obviously tuned to the Domintell home automation solutions.

The place is fully automated. Its main functions are carried by the Domintell system. The whole lighting is controlled by our different modules, in particular the multicolor LED lighting which allows to create customized room atmospheres with up to 256,000 different colors. The shutters and curtains also have an automated operation depending on some factors such as time or temperature. As for the heating, it is controlled and enabled when needed, as well as the ventilation system.

Also, thanks to our technology, the residents receive an SMS alert for events in the installation. For example, a water leak is instantly detected and notified. Moreover, as soon as the leak is detected, the Domintell system takes the necessary measures, in this case shutting off the water supply via the valve. The apartment is then made smart and autonomous in its operation for the daily comfort of all.

Testimony

“ We wanted to equip our new apartment with a home automation system to ease our daily life by not having to handle ourselves the basic tasks. It is a real plus for our daily life comfort not having to care about the heating, shutters, ventilation or being able to control them all with a few design pushbuttons. We were already very proud of our of this apartment, but with Domintell, we are even prouder!”

The owners

Objectives of the installation

Shutters and blinders

The operation of the different shadowing devices such as electrical shutters or blinders is fully automated and configurable.

Lighting

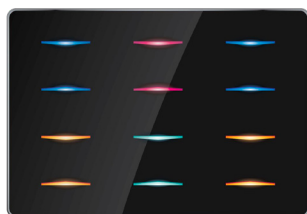

Customize the control of your lighting and your various lighting atmospheres for a use adapted to your lifestyle.

Alerts

Receive alerts instantly from your smart home for the events you should not miss.

Zoom on the design

The range of Domintell touchscreens and control devices perfectly fits in all types of residences. The design is varied, from classical to modern, with numerous RGB colors and many material possible combinations. These touchscreens are customizable with pictures, logos or icons that you can upload to your screen.

Push-buttons from third-party suppliers can also work as inputs for the Domintell system thanks to our interfacing devices.
