

## Pondrôme Castle-Farm - Beauraing, Belgium

### The project

The Pondrôme Castle-Farm is a gîte located in Beauraing, in the Province of Namur. This 450m<sup>2</sup> domain with 7 bedrooms and numerous amenities, is a typical project for a Domintell home automation installation. Indeed, being able to manage a house this big and ensure the comfort of twenty people simultaneously requires a centralized and most automated possible control.

In Beauraing, the whole castle is equipped with the Domintell system. The lighting is managed as groups depending on the area and it is configured to adapt its operation depending on the moment of the day. Many motion sensors also automate the lighting based on the passage and dimmers allow to set atmospheres in some rooms. The whole building can be monitored and controlled from anywhere in the castle via the Domintell Pilot application.

Essential considering the size of the site, the owner can also have an overall view of the installation through a main touchscreen. This gigantic vacation home is therefore easily automated and customized with the configurations made by the staff, which provides it a significant added value to welcome guests in ideal conditions.

### Testimony

“ It seemed obvious to us that a site of this size should be equipped with home automation. It is now easier for us to adapt the operation of the castle to our vision of guest welcoming thanks to the Domintell technology. Especially as the configuration was very simple and intuitive. We are also currently building an extension, which will also be automated and linked to the main part to form a single installation manageable from the main screen or the Pilot application.

**The owner**

**Added value**

Bring quality and added value to the gite through the installation of a Domintell home automation system.

**Automation**

Thanks to various sensors and configurations, the smart gite runs autonomously for an optimal comfort.

**Total control**

With the Domintell Pilot app, the installation can be controlled from anywhere in the castle.

**Zoom on Bed & Breakfasts**

Nowadays, more and more vacation home managers equip their building with home automation solutions in order to make autonomous buildings out of them. A smart gite, handling its operation itself, is not only another comfort of stay for the guests but also simplified maintenance and management for the owners. This added value is indeed undeniable and makes the experience unique. With the Domintell system, it is most of all a quick installation, even in already existing buildings, and a simple and customizable configuration at any time by the owners. The operation of all the equipment can even be monitored in real-time via the various screens, a smartphone or a tablet.
