de 100 € à 120 €

Le beau est la splendeur du vrai.

Léon Blum

Dimensions M Gite - Corbais, Belgium

The project

In the heart of Walloon Brabant, the five guest rooms of the Dimensions M gite from Corbais offer accommodation solutions for business or leisure stays. In order to maximize the comfort, the safety and the general control of the whole building, it has been chosen to use a home automation system able to answer efficiently all these needs. The owners then opted for the Domintell system, a home automation system granting those possibilities for a total installation and configuration comfort for the 5 rooms of the site.

Here, the automation system manages a dimmed and automated lighting in the rooms and living rooms with remotely controlled subfloor heating and automated shutters. Thus allowing a centralized control via a touchscreen and the Domintell Pilot app. Also, the safety angle was not forgotten since the whole building is equipped with a system composed of alarms and rooms with code locks and cameras. All of it is directly linked to the Domintell system, which enables the automation of the actions and reactions to trigger in case of an incident.

Testimony

“

Thanks to building automation solutions, we wanted to have the most optimal energy management and the possibility for our clients, or ourselves, to keep an eye on the status of the whole building. This to make sure everybody has an enjoyable stay. Comfort also requires total automation of every room, which allows our clients to customize and control their space via their own smartphone or tablet. This way, everyone can arrange the place at will, for a most welcoming stay by feeling home!

The owners

Safety

Automated control of the cameras and configuration of a safety system.

Automation

For anyone's comfort the lighting, the blinds and the heating are automated and remotely controllable.

Standardization

The 5 rooms of the facility are based upon a similar standard and a basic configuration.

Zoom on the security

It becomes everyday more important to secure your home. Keep control over your various rooms and devices by configuring their remote control. Therefore, secure your house and filter the accesses with the Domintell technology. The information is instantly provided to you and allow you to monitor in real-time the safety of your house. Moreover, it provide your house with an optimal safety thanks to the presence detectors and connected alarms, which can be configured to alert you in case of an intrusion wherever you are via your alerts. Go to work or for a weekend trip with peace of mind, Domintell protects what it is you value.
