

Sleepwood Hotel - Eupen, Belgium

The project

This hotel with a 100% wooden structure was inaugurated in 2016. The latter is part of a sustainable construction approach using only materials of natural origin. Built with untreated Austrian spruce trees, the establishment is committed to respecting nature all the while providing a top-of-the-range service. The bedrooms, although offering minimalist comfort, are equipped with Domintell technology, allowing guests to control lighting, heating and ventilation throughout their stay. The installation also acts autonomously: the heating is automatically turned off if a window is opened, thus avoiding unnecessary energy waste. The wood in all the rooms captures heat. The purpose of all this is to create an atmosphere of well-being and a unique experience.

The touchscreens and their stylish look fit perfectly into this setting that is both simple and modern. Their user-friendly interface also allows the hotel staff to easily manage the establishment.

In line with the values put forward by the hotel, the automation system coupled with the wooden structure make it possible to achieve a controlled level of energy consumption.

Testimony

“ Domintell's solutions allow the hotel to be managed in a more intelligent and responsible way. Offering our customers the possibility to configure their bedroom is one of our most precious assets. Therefore, they are the ones who choose the environment that seems ideal to them, in order to have a most pleasant stay. Using devices affecting our energy consumption, the installation is in tune with our approach of a sustainable construction made of wood and clay, thus creating the optimal conditions to offer an experience combining nature and technology in a perfect blend.”

The Owners

Energy savings

Reduce your energy consumption by taking control of your appliances.

Room management

Manage all the rooms in your hotel from a single place, with a single touch.

Comfort

Create the atmosphere you want in a room by influencing lighting, heating and ventilation.

Zoom on the DPBTLCD02 touchscreen

This small LCD touchscreen, available in three different colors, manages various aspects of an installation including lighting, heating, audio, ventilation and air conditioning. It is also equipped with a probe to measure the temperature of the room in which it is located. This discreet screen blends well into a room with a contemporary style. In addition to these multiple functions, the screensaver is fully customizable: choose between displaying a clock, the temperature, a logo or even photos.
