

Private House - Walhain, Belgium

The project

For this newly built house deeply inspired by the typical 18th century architectural design from the city of Bruges, M^r Vanderjeyden wanted to combine an old style for the look of his house with the new technologies of residence equipment. Thus, the interest for home automation began.

The first priority here was to secure the house. This is why it was chosen to use the Domintell system to link it to cameras, then insuring the constant security of the area. An alarm system was also configured thanks to the various features offered by the Domintell technology. Alongside the security, the heating system of the residence was also automated by us in order to enable a better heat pump consumption management and an automated subfloor heating.

The whole automated system of the house is controlled via a central screen set in the living room, alongside glass pushbuttons from the Rainbow range which are customizable thanks to the RGB technology. They can then adapt to any environment.

Testimony

“

I was looking for an easy-to-configure home automation system which was at the same time able to use all the latest technologies (dimnable LEDs, heat pump management, cameras, audio, subfloor heating). Also, as home automation changes everyday, i wanted to work with a system offering a quality and accessible technical support. With its small structure close to customers, Domintell immediately seduced me.

Kris Vanderheyden
Owner

Safety

Automated control of the cameras and configuration of a security system.

Design customizing

Possibility to customize the design of the buttons thanks to the RGB technology.

Heating

Centralized management of the heating systems of the whole house.

Zoom on the Rainbow buttons

The Rainbow range is our range of glass pushbuttons with indicator lights and backlight. Their unmatched design, alongside the RGB technology grant the possibility to easily place them in any environment, even the most sophisticated. Their indicator lights are indeed configurable button by button, among a selection of 16 million colors. The selected colors are then eparately dimmable for an even more advanced customization. The range features designs with 2, 4 or 6 buttons, alongside LCD touchscreen solutions.
