

Esentai Tower - Almaty, Kazakhstan

The project

In the heart of the Business Center of Almaty, biggest city of Kazakhstan, the Esentai Tower is a major business tower of the former capital of the country. The Domintell system was chosen to be part of an installation for company offices on the eleventh floor and also several private apartments inside the majestic building.

Here, the project was to provide a large transport company with a building automation system that would help their activity. This was done by automating the lighting system, the microclimate system and the control of the blinds. Also, two main rooms of the venue were made smart : the office of the company director and the conference room. Indeed, the latter were a real challenge for the firm. The staff wanted to have their meeting atmosphere automatically set by the smart system and the room occupancy status to be displayed and modulable.

Some private apartments also received an automation of their lighting, their climate and a security system integration through the Domintell technology for better comfort inside those luxurious flats.

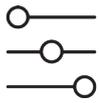

Testimony

“

I had a thoroughly good experience with the Domintell system. From the installation to the configuration, everything went smoothly. In order to have the best experience with our own use of the Domintell technology, we were offered free trainings for the IT specialists of the company for maintaining and reprogramming the system. This allowed us to independently take care of all the equipment and we never had the need to contact the supplier ever again for additional support.

The owner

Total control of

Internal lighting, ventilation, blinds, meeting room equipment, network, TV, security system (temperature, motion, smoke, water leakage sensors), touchscreens.

Energy savings

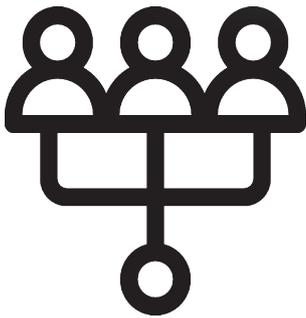

Monitoring of the electrical consumptions in order to optimize the energy spendings.

Automation

Lighting and climate automation for offices and corridors. Can be remotely controlled with the Iridium software.

Zoom on the meetings rooms

Your meetings often require a perfect organization in order to take place in the best conditions. Thanks to the Domintell system, it is then possible for you to create atmospheres conducive to work. Configure your lightings and automated openings to optimize your environment through lights with customizable intensity or remotely controlled electrical devices for efficient presentations. Moreover, the Domintell system allows the centralization of reservations and the possibility to display information at the entrance of your meetings rooms. Manage your meeting rooms according to your needs and adapt your communications with our Domintell automation systems.
