

HOres art gallery - Sint-Martens-Latem, Belgium

The project

The HOres art gallery of Sint-Martens-Latem has been equipped with the Domintell system for several years now. The level of sophistication when it comes to lighting in an art gallery being a lot more challenging than in a classical installation, the owner was looking for a solution allowing her to design the perfect atmospheres.

The lighting quality can sometimes be as important as the art piece itself. This is why it was an obvious decision to go for a building automation system. With its lighting atmosphere advanced customization feature, the Domintell system was the perfect solution.

Moreover, this atypical art gallery also offers to visit rooms from the daily life featuring art pieces, in order to appreciate art in a familiar environment. Indeed, this gallery features a kitchen, a bedroom and a bathroom equipped with the Domintell system, which allows to showcase the art pieces. The automation system also operates here to make the building smart with a central control of the venue with a main touchscreen, granting a general view over the status of the gallery.

Testimony

“It was important for my gallery that I could create various lighting atmospheres to better showcase the art pieces. From one exhibit to another, I can then choose among my own configurations what will suit best. Also, everything is controllable from a single button, even the night mode when closing the building, in which the shutters also are automated. I actually equipped my two other galleries with the same system for better ease with my configurations.

Niña Van Den Bosch
Owner

Objectives of the installation

Atmospheres

Creation of customized lighting atmospheres to showcase the art pieces of the gallery.

Centralization

Control of the whole building and information about its status via a central touchscreen.

Standardization

Equipment of several branches of the same chain to harmonize the configurations and create a standard.

Zoom on the lighting

With a total control on your lighting by Domintell, it is now possible to master the whole house. Configure your lightings depending the light needs of every room, control all of it from your main touchscreen, monitor which light is on thanks to the steps display. The total control over your lighting also allows you to combine it with movement sensors which will turn on or off your rooms in regards with the passage inside them or with the time passed. Our system allows a centralized command of your customized lightings via a main DTSC0x touchscreen.
