

Private Apartment - Moscow, Russia

The project

This apartment with a total area of 850 sq.m. is located in the center of the Russian Capital of Moscow. Its home automation system includes no less than 315 Domintell modules making it a highly automated design residence.

The substantial installation has many features. Lighting consists of 260 independent light groups fully controlled by our system and motion sensors. Climate is smartly managed for 25 independent heating zones with 16 air conditioners with autonomous operation. 23 motorized vents, 9 air quality sensors, 67 motorized curtains/shutters are also monitored and timer-operated. Safety is taken care of with 24 IP cameras and 4 intercoms working with motion sensors and with arming/disarming via fingerprint and SMS or push notification messages on the owner's smartphone. Moreover, any incident such as water leakage triggers automatic shutdown and smartphone alert. Audio and video were not forgotten with 10 TVs, 3 home cinema systems and 16 audio multiroom zones.

All these features are linked to the Domintell system for monitoring and autonomous operation. The control of all the apartment is made via wall-mounted pushbuttons from our Metal range, offering a variety of plate designs (with plugs, USB, lamps etc.), colors and material. Besides, the whole installation can be controlled from any smartphone or tablet.

Testimony

“ Our immense apartment project needed a trustworthy technology that was able to run such an installation. Domintell was our choice since its range of modules allowed us to fit all the functionalities we needed in the whole place while being robust and reliable for the years to come. From audio and video to lighting and security, everything we wanted was covered by a Domintell feature. In addition, design was one of the most important criteria for our choice of control panels and Domintell offered the perfect solution with tailored pushbuttons.”

The owner

Versatility

The domintell system covered all the features the owners wanted to automate.

Build to last

The apartment was equipped with a technology build to last many years.

Design

Design always being personal, inputs were customized by owners.

Zoom in on the Metal range

Our Domintell Metal pushbuttons range is one of our most successful series of control panels. Besides the classic option of one, two or four keys, we made sure everyone could get the input of their dreams. This way, we offer pushbuttons solutions that allow people to customize the full plate with the possibility to add other features directly on the pushbutton pad.

Besides your classic keys, add lamps, plugs, usb charging points and much more to better answer your needs. With many combination possibilities, the pad will always be perfect for the use in the specific room where it is located. Design also being paramount and varying from one room to another, the Metal range also offers different materials to better fit your interior.
