

## STOKERS building - Antwerp, Belgium

### The project

Brand new concept in Antwerp, STOKERS is a place which can fulfill many roles. Rented as co-working spaces, a meeting venue or even a canteen, the multipurpose building was enhanced thanks to the Domintell system. This architectural place where people gather used to be a military hospital but was recently reshaped for an all other type of use. In order to turn it into a design and cozy site, the owners decided to make use of the benefits of building automation.

The venue being used for almost any type of gathering, it needed a system as much flexible as the concept. Domintell was then the right choice and it was decided to let it manage the lighting, the heating and the access control of the whole place. The building being separated into several areas composed of meeting rooms, offices and spaces, the system was perfect since it was designed to create independent settings for each area. Nevertheless, this room-by-room configuration does not prevent from having an overview of the whole facility. Indeed, it can be monitored and managed via a central touchscreen or the Domintell Pilot app.

### Testimony

“ For our multifunctional environment, we wanted a system that was as much flexible as our concept. Providing an atmosphere favorable for every potential use of the building is essential in our activity and Domintell was the perfect system for this. Also, when STOKERS hosts late night events, we do not have to be there to shut down the whole building or adjust the heating since all of this is automatically managed according to our own configurations on the software or via the mobile app. Domintell was the ideal answer to the various needs of our flexible applications!

**The owners**

**Multipurpose**

Flexibility and adaptability of the system for singular customer needs.

**Atmospheres**

Customization and adaptation of the atmospheres from the technology for the guests needs.

**Remote control**

Remote control of the whole installation from anywhere, at any time via Domintell Pilot.

**Zoom on the app remote control**

Combined with the new DGQG02 Master module, your smartphone can control the whole installation thanks to the Domintell Pilot app. Link it to the installation and its Master module after a quick and easy configuration. The mobile app then allows you to customize and control your whole installation at will, from anywhere. Thanks to an intuitive design and a smooth ergonomomy, Domintell Pilot gives you access to the full control of your building. Lighting, heating, shutters, inputs, outputs, everything is now under remote control! Available for free on the Google Play Store and the Domintell app store.
