

Domaine des Thermes - Awans, Belgium

The project

Opened in 2023, **Domaine des Thermes of Awans** is a thermal wellness center housed in a former 18th-century farm. It includes a spa, hotel, and restaurant and covers 2,000 m² of facilities, including a 100 m² indoor pool heated to 31°C, saunas, a hammam, hot tubs, and more. To **automate day-to-day management**, the thermal center chose our Domintell home automation system.

Lighting across the site's different zones is managed by **Domintell automation**. Thanks to our intelligent modules, the visitor area enjoys the ideal lighting ambience every day, with **lighting fixtures and LED strips** of outstanding quality and reliability. The outdoor lighting is programmed with **astronomical clocks** to create the ideal atmosphere as night falls.

The property is also equipped with our **7-inch touchscreen from the Rainbow range**. It provides complete, centralized control of the entire site and all its home automation equipment, making day-to-day management more convenient.

Testimony

“

We wanted to equip our spaces and their different atmospheres with a reliable, effective home automation system that would manage daily operations automatically. We no longer wanted to worry about managing the lighting. With the Domintell system, the building's lighting operates autonomously while creating the warm atmosphere of a spa with soft or even colored lighting. We have even programmed centralized switching on and off for opening and closing hours—a real convenience every day!

The owner

Objectives of the installation

All ON/OFF

Turn off the entire site automatically with a single tap on the touchscreen or through the Domintell Pilot 2 app.

Scheduling

Plan when during the day your lighting should adjust automatically and discreetly.

LED RGBW

Your automated lighting and LED strips are integrated into your lighting ambiances and all your scenarios.

Zoom on the LED RGBW controle module

The DRGBW01 module is our LED strip control module. It controls all types of ambient lighting: RGB, RGBW, and single-color, including white, with the « *True White* » feature.

Thanks to its intelligent control, combined with your ambience and scenario settings, you can integrate colored ambient lighting into all your home automation routines.
